

## Clean Solution

The Wax-Free Membrane

# ALKOseal

Our ALKOseal liners, especially used for sealing premium grade coffees, spreads and all powdered products, are a protection against unwanted external influences. They also enable resealing properties.

The substrate material and the membrane are bonded by a polymer layer. As a membrane for screw caps and snap caps, ALKOseal liners are suitable for all container and closure materials.

We provide induction heat sealing or glued sealing in this range to meet different customer requirements.

MEYER Seals offers you the optimal problem solving solutions.

# Clean Solution

The Wax-Free Membrane

## ALKOseal Combinations

Container Material Substrate Material*	for glued sealing	for induction heat sealing
Chromo-Cardboard	ALKOseal Chromo gold	ALKOseal Chromo safe 20/20
PE-Foam	ALKOseal EPE gold	ALKOseal EPE safe 20/20
PP-Foam	ALKOseal EPP gold	ALKOseal EPP safe 20/20

\* To ensure an accurate separation between the substrate material and the membrane, the wads should be inserted in the closure to rotate freely under a retaining rim.
